

CONSERV Equipment Corporation

Volume 1, Issue 2, November 2009

to become exclusive distributor in Texas

Sysdyne is very proud to announce that Conserv Equipment Corp. is the exclusive distributor of our automated batching products for the state of Texas!

Conserv Equipment Corp (Conserv) was founded by Mr. Terry McCann in 1985 in Houston, TX. The company started as a service entity assisting concrete suppliers in erecting concrete plants and installing automatic batch controls. With over 25 years in the industry, Conserv is the dominant supplier in its home market of Texas. Many companies rely on their expertise. Conserv is the distributor of Con-E-Co batch plants in Texas.

Mr. McCann began his career in concrete industry by servicing batch controls in 1971 in St. Louis, MO. He has accumulated extensive first-hand experience with batch controls and concrete plants after 40 years in the industry. We believe our relationship with Conserv will enhance Sysdyne's presence in the area. Mr. McCann's in-depth knowledge of the concrete business and automation products will further strengthen Sysdyne's support to our customers.

New Concretego.com Brochure Available!

After weeks of hard work from our sales and marketing teams, we have released the new brochure for ConcreteGo.com! This letter-sized, bi-fold brochure details the features and benefits of our newest product. Learn how to save money the easy way! If you would like a copy, feel free to call or email us. It is also available on our website.

We've been getting wonderful feedback from our customers regarding ConcreteGo.com. Here is a quote from an email that we have received recently:

"ConcreteGo.com has the necessary tools to effectively and efficiently allocate my resources to my customer's needs."

PCS Concrete

Q&A with Dani

Q: I have a SYSDYNE MRC-PRO counter that I have been using with a limit switch. I'd like to be able to use it with a proximity sensor instead. Which proximity sensors can I use?

A: Our counter will work with ANY two or three wire proximity sensor. Please contact us if you would like pricing on sensors or have technical questions. Just as a reminder, our counter is approved by NYSDOT for use with a proximity sensor. Please note, you can only use proximity sensors with our new, black counters [square reset].

Reminder! Batching Program Version 1.31.151 is available for download on [our website!](#) Don't forget to check out the latest release notes for information on bug fixes and new features! If you subscribe to our Remote Access service, click the Online Support link in this email if you need immediate assistance.
